

Developer

Why Money Dashboard?

We're building the best personal finance app in the world

We first launched in 2010, with a small team in Edinburgh, passionate about making the often-confusing world of personal finance more open, transparent and accessible for everyone.

Today our mission remains the same: to help people from every walk of life be happier and more successful by mastering their money. We're on a mission to change millions of lives, and have made a strong start. And the best is yet to come.

Are you passionate about our mission? Do you want to be part of the next big fintech success story?

That's where the team comes in

We hire the best people and let them get on with it

A strong belief in what we do is what gets us out of bed in the morning. We believe less in job titles and more in organising ourselves with a common goal to get things done.

- We collaborate and seek input from others to do our best work
- We are accountable for our own acts and omissions, celebrate our wins and look for ways to improve our work, our product and ourselves
- We disrupt and we learn fast
- We focus on creating a culture that works for everyone and seek people who will help us challenge our own assumptions

Here's what our ideal Developer looks like:

- You're looking for more than just a paycheck. You share our vision of a more open and transparent financial landscape for all
- You are a quick learner and keen to develop your skill set
- You work well as part of a team
- You have a proven track record of delivering at pace
- You don't wait to be told to do something
- You're excited by the potential of fintech

Sound like you? Here's some of what you'll be doing:

[Role Reference: MDB-Dev](#)

- C#.NET (& Core)
- Entity Framework
- SQL Server (2014 / 2016), MySQL (5.8)
- RESTful Web APIs and back-end implementation
- AngularJS and other modern front-end frameworks (such as React)
- Serverless / containers in .NET Core, Python, Node.Js
- Working with cloud architectures & development (AWS), Serverless event driven architectures, Containers and Microservices
- Design and implementation of software solutions using proven software engineering techniques
- Implementing security best practices due to the sensitive nature of the data we handle

You'll be in good company

You will be part of an established Technology team filled with high achievers. You will have an immediate impact and play a key role in taking Money Dashboard to the next level.

What we offer:

- Competitive Salary
- Pension Contributions
